INTRODUCTION

The **CV-35CAK 12G/6G/3G/HD-SDI to HDMI 2.0 Converter with USB-C 10Gbps Video Capture & Audio Extractor** offers a cost-effective solution for converting 12G/6G/3G/HD-SDI signals to HDMI 2.0 compliant format. The conversion from SDI to HDMI is entirely digital, ensuring no loss in transformation for both audio and video. The CV-35CAK includes a low-jitter SDI local loop-out and high-quality analog stereo output, providing users with flexibility.

Furthermore, the device features a video capture function, allowing users to capture and display original uncompressed SDI video with more realistic color rendition. It utilizes the USB 3.2 Gen 2 Type-C (USB 3.2) interface for high-speed transmission. The CV-35CAK also incorporates large volume image buffer technology, effectively preventing video tearing. With a high sampling rate and accuracy, the captured videos exhibit high sharpness, rich details, and fewer color edges.

TROUBLESHOOTING

Our USB device has done comprehensive tests before shipment. Most of the incompatibilities we have experienced are not from the USB capture device itself, but from the sophisticated software and hardware combination of PC or laptop. Please follow the following suggestions to see any helps.

- OBS is popular USB capture freeware and has excellent compatibility. Please download it and start with OBS if users are not familiar with USB capture device.

<https://obsproject.com/download>

- Due to the complexities of OS and computer hardware, different USB ports on PC or laptop may have different performance or limitation. Please try all USB ports to see if there are any differences.
- Please must use the USB cable in box. We do not guarantee the overall performance when the USB capture box works with some other USB cables.
- HDMI/SDI cable quality may also play an essential role when capturing. Please be sure of that HDMI/SDI cable can do 4K2K@60 HDMI/SDI signal transmission or better. Try different cables when the device is not able to work as expected.
- If audio has noise when using the PotPlayer software, please adjust the audio renderer to WaveOut on the software. The setting path is:
PotPlayer ▼ → Audio → Audio Output → Audio Renderer → WaveOut
- If there are problems such as video flipping or wrong direction when using VLC software, please rotate, flip or transpose the video in the VLC software to correct the video. The setting path is:

Tool → Effects & Filters → Video Effects → Geometry → Transform
